

Transforming Community Intelligence through Technology

The partnership between Crime Stoppers Tasmania and Motorola Solutions is helping more Tasmanians share information safely, securely and anonymously.

Through a purpose-built online reporting portal, community members can submit information, photos and video directly to Crime Stoppers Tasmania from any device.

Demonstrated Impact

- Online reports have almost doubled in four years, since the portal was implemented in 2022.
- 84% of all Crime Stoppers tips are now received online, making the portal powered by Motorola-Solutions' technology the primary reporting channel for communities.
- Reports including photo or video evidence have reached 24% delivering richer intelligence and greater investigative value.
- Approximately 70% of reports are submitted anonymously, reflecting strong community trust in the platform.

Trusted Technology

Motorola Solutions brings global expertise in public safety technology, providing a robust and secure platform designed specifically for anonymous and efficient community reporting. The portal removes barriers to reporting by making it easy, mobile-friendly and accessible.

The ability to securely upload photos and video via the portal is helping shift valuable information away from being shared on social media and directly to police, where it can be assessed and acted upon.

Stronger Together

The success of the portal demonstrates what can be achieved when community, technology and law enforcement work together:

- The Tasmanian community provides the information, observations, photos and video that help keep communities safe.
- Motorola Solutions provides the innovative technology platform.
- Crime Stoppers Tasmania provides a trusted, anonymous reporting pathway.
- Tasmania Police receive and act on intelligence to support investigations and crime prevention.

Together, the organisations have created a modern reporting system that is increasing community participation, improving the quality of intelligence about crimes and helping keep Tasmanians safe.

Technology that people trust. Information that makes a difference. Outcomes that strengthen community safety.

Built for community. Designed for trust.
